

MERCURY (ICP)

INCIDENT COMMAND POST

NEW
PRODUCT

MOBILIZE. MANAGE. RESPOND.
TO ANY CRITICAL SITUATION

Introducing the **Reeves MERCURY Incident Command Post (ICP)** — the complete lightweight, transportable command solution to mobilizing a fully operational fire-rescue incident command post quickly and efficiently.

Navigate varying terrain and extreme environmental conditions with the MERCURY's specialized trailer and shelter combination. The trailer offers nearly a foot and a half of ground clearance and lightweight design (approximately 2,200 lbs.) to ensure that it can travel anywhere your vehicle can go.

Once on the incident scene, deploy the double-wall, insulated shelter with minimal personnel in minutes. The MERCURY's optional interoperable communications equipment includes satellite communications, Internet access and an integrated command and control system — all within a manageable footprint. The MERCURY also facilitates communication between land mobile radios, multi-channel radios, cellular and landline phones.

For additional information contact us at (800) 328-5563 or visit www.ReevesEMS.com/mercury.

FEATURES

- Lightweight trailer weighs approximately 2,200 lbs. depending on equipment loading. Includes 17" ground clearance for multiple terrain capabilities.
- Shelter's double wall insulation and rugged construction is based on the latest military technology and is able to withstand extreme weather conditions, such as high wind and blowing rain. Shelter is easy to set up and strike. Two people can set up or strike the shelter in under 20 minutes.
- Optional communications suite includes radio bridge for departmental interoperability, teleconference capabilities, satellite TV, phone and Internet capabilities as well as a display system for in-field information viewing.
